ABSTRACTED-PUB-NO: DE 2357726A

BASIC-ABSTRACT:

A single or multiple coated print body capable of being embossed, esp. for wallpapers to be printed by gravure or flexographic processes, has a coating consisting exclusively of pigments and adhesives applied by burnishing scraper methods, the specific volume of the stock being greater than 1,2 cm³/g. The base material may comprise a conventional, machine-polished paper, a duplex paper or a paper glazed on one surface only. Provides a stock with a remarkably smooth surface similar to art paper, esp. suitably for the reproduction of half tones without missing dots by gravure printing or flexography. Its embossing qualities are retained and there is no need for supercalendring, surface densifying etc.
